

Nulogy Production Scheduling Solution

Planners play a pivotal role in ensuring the success of a contract manufacturing or co-packing operation. Production scheduling is the link that ties production operations to other departments within the business; as a result, effective production scheduling is critical to ensuring business success.

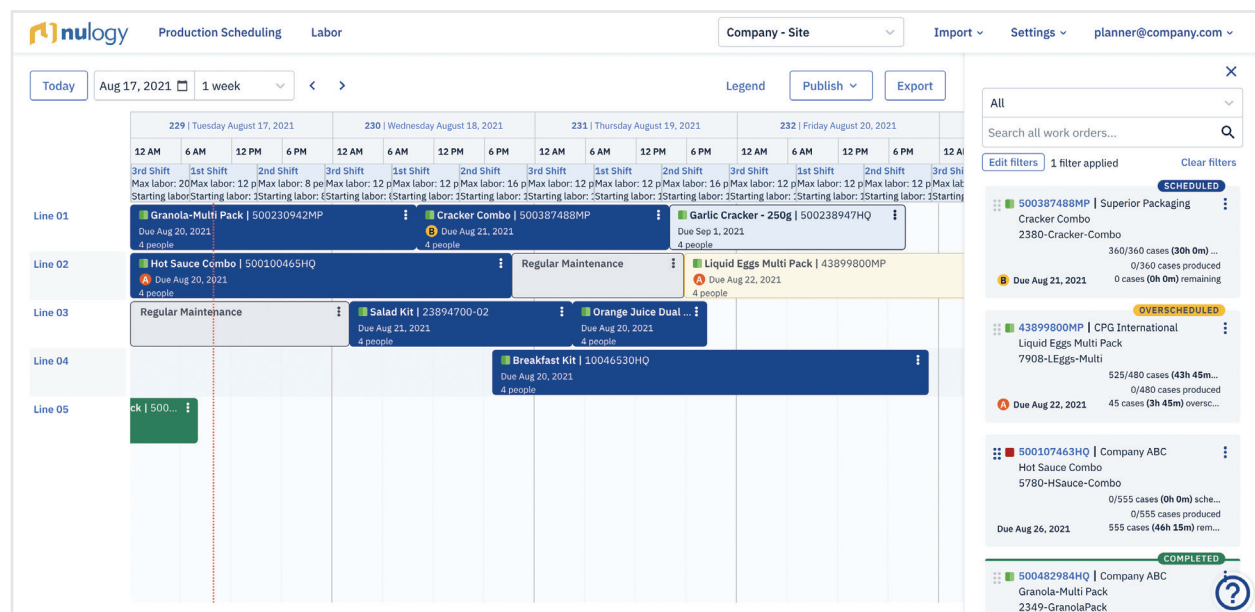

A production schedule should be accurate, actionable and adjustable to ensure the shop floor is always performing and delivering against changing customer demands. However, many planners still rely on Excel spreadsheets, which are error-prone and time consuming to manage. Relying on these manual methods also leads to a lack of site-wide data visibility, and denies planners the ability to quickly respond to changes.

In a market with fluctuating demands, how do you equip your planners with the right tool to dynamically manage production schedules for maximized operational efficiency and agility?

NULOGY PRODUCTION SCHEDULING SOLUTION

The Nulogy Production Scheduling Solution is an intuitive, drag-and-drop-based module that allows you to quickly visualize and optimize your production schedules based on various constraining factors, current demand, downtimes, run rates, and more. The Production Scheduling Solution also:

- Provides site-wide visibility to the schedule within the organization, and the ability to iterate, test and manage changing requirements safely.
- Establishes a single source of truth while moving away from brittle spreadsheets that are dependent on siloed knowledge.

FEATURE HIGHLIGHTS:

Drag-and-drop scheduling helps planners do their jobs more effectively, while highlighting any red flags

Make adjustments in real-time for higher responsiveness, agility, and last-minute flexibility

Assess key factors such as due dates, labor requirement, line availability, run rates, etc.

Summarize labor requirements by shift

Run what-if scenarios without affecting production

Share the result with others for site-wide visibility

Nulogy's automated Production Scheduling Solution helps us track production more quickly, which allows us to be proactive in managing customer orders as well as our staffing. The real-time visibility into our capacity also gives us the ability to respond to customers more quickly for customer service wins.

MARK KONITSCH, PROJECT PLANNING MANAGER, CRESCENT

OPERATIONAL BENEFITS:

Optimize capacity using existing resources

Generate accurate schedules for production managers

Run what-if scenarios effortlessly

Respond to urgent requests with faster turnaround times

BUSINESS OUTCOMES:

Increased confidence on schedule attainment

Easier collaboration on delivery timelines

More agile and responsive service for CPG customers

Improved profitability and growth

Unlike other solutions that involve offline, spreadsheet-based processes, the Nulogy Production Scheduling Solution is purpose-built for contract manufacturers and co-packers who need a scalable production planning solution and want to leverage the expertise of the planner and safely grow their business.

With the Production Scheduling Solution, seamlessly manage your short-term production capacity, allowing you to accurately adjust to the changing production demands of your customers.
